

Cover Letter:

I am currently studying at the 4<sup>th</sup> grade of Computer Engineering Department & at the 3<sup>rd</sup> grade of Business Administration department in Koç University. In both of the departments, the language of my education is %100 English. 1 year is left to my graduation from both of my departments. (June 2023: Graduation date expected). In my free time, I have been solving coding problems from the sites called Hackerrank and Leetcode by mostly using SQL, Python, and Java. I have been also doing some basic projects with Java (such as Tetris game, MaximumPathSum algorithm, and so on) and Python (such as extended statistical calculator) in my free time. Moreover, I have mostly done projects by using Java and Python in my university life. I want to be working on Data Science and/or Java technologies in my career also in this role. I want to be developing myself in Java technologies and Java testing technologies by taking responsibility in a wide variety of large scale projects. I have an upper intermediate level of English in reading, writing, listening, and speaking. I have also a German Knowledge having a level between A1 and A2 (where C1 is the highest level of German). I have knowledge currently on SQL, Python, Java, C, Assembly, Scheme, Lisp, PHP, and Swift programming languages. I have also good knowledge of Java Junit Testing, and SwiftUI Testing. I have also basic knowledge about Javascript, and moderate knowledhe about HTML, and CSS. Moreover, I have been maintaining a Data Science track program. Since I want to develop myself with large projects and have no internship experience about Data Science, I want to firstly be involved in a long-term internship about Data Science. Secondly, my preference is to be involved in a long-term internship /part-time role about Java Development.
